Find USB Port used

When plugged in ESP boards might use different tty ports, based upon the UART chipset and driver used. Some examples:

- original ESP32-Devkit-WROOM –> **/dev/ttyUSB0**
- ESP32-C3 mini –> **/dev/ttyACM0**

To find out which port is used, run the following command and unplug/plug the ESP32 board:

```
sudo udevadm monitor -u
```
