

Checked Installed Packages

Check single package

Run `apt list package`, it will return the available version and if it is installed “[installed]”

```
# apt list package

# apt list bluez
-----
Listing... Done
bluez/stable,now 5.66-1 amd64 [installed]
-----
```

Query all manually installed packages

```
# apt list --manual-installed=true
```

or

```
# apt-mark showmanual
```
