

Removing Old Kernels

To find out the current version of Linux kernel running on your system, use the following command.

```
uname -sr  
  
Linux 4.19.0-8-amd64
```

To list all installed kernels on your system, issue this command.

```
dpkg --get-architecture | grep linux-image  
  
ii linux-image-4.19.0-6-amd64 4.19.67-2+deb10u2 amd64  
Linux 4.19 for 64-bit PCs (signed)  
ii linux-image-4.19.0-8-amd64 4.19.98-1+deb10u1 amd64  
Linux 4.19 for 64-bit PCs (signed)  
ii linux-image-amd64 4.19+105+deb10u3 amd64  
Linux for 64-bit PCs (meta-package)
```

Do the same for kernel headers:

```
dpkg --get-architecture | grep linux-headers
```

Run the commands below to remove a particular linux-image along with its configuration files, then update grub2 configuration, and lastly reboot the system.

```
sudo apt remove --purge linux-image-4.19.0-6-amd64  
sudo update-grub2  
sudo reboot
```
